

Mini IP Solutions – SOHO Power Reboot & KVM Gateway Over IP.

Why choose a Mini IP Solution?

Unlike a rack mount device which is installed in an IT server rack, Austin Hughes Mini IP Solutions, comprising [MiniBoot](#) and [Mini IP KVM](#), can be applied in various environments for diversified applications, including:

- SOHO (Small Office/Home Office)
- Transportation (Air, Land and Sea)
- Broadcasting
- Entertainment
- Advertising
- Manufacturing
- Mining
- Satellite
- Defense
- Education
- Telecommunication
- Finance & Banking
- Commercial

MiniBoot

MiniBoot is a powerful tool in a small form factor that delivers enterprise-level power distribution outside of the rack and enables the ability to reboot a device from anywhere via IP. Being able to exist outside of the rack is key to enabling the following features for edge computing solutions.

The MiniBoot device auto pings via IP, which checks for the need to reboot the connected device(s), automatically detecting system failure. A reboot is then initiated without an engineer having to physically attend to the equipment onsite.

The IP connection also enables remote monitoring via an included Graphic User Interface (GUI), allowing for a more robust IT solution. The remote management via online GUI consists of HTTP(S); SSH Command Line Interface; Telnet; SMTP; and IPv6/IPv4 protocols.

The MiniBoot applications are vast (the previous list not exhaustive) and one industry where the adoption of the solution has been popular is within multinational pharmaceutical and biotechnology companies.

For further details and full specification check out the [Mini IP Solutions Brochure](#)

Mini IP KVM

Austin Hughes Mini IP KVM is the ultimate solution for remote server management. With advanced features, you'll have complete control over your servers anytime, anywhere.

Its compact size makes it perfect for small spaces, while its user-friendly interface ensures easy setup and operation.

High Performance IP Remote Access, Enterprise Level IP Authentication, Control over IP & BIOS-level Access.

In today's digital age, businesses and organizations are increasingly reliant on remote management to save manpower and travel costs. IT administrators need to remotely manage PCs or servers over IP.

Austin Hughes Mini IP KVM is the ultimate solution for a convenient, cost-effective solution of remote PC management over IP.
